

Initial Results Reflection

After reviewing your student perception survey results, reflect on your results using the following questions. Try to step back during your reflection to see the big picture and think about what the results of the survey mean for your students and your practice.

1. How do you feel about your results at a glance?
2. What did you predict would happen in the self reflection?
3. In looking at the results, what is affirming?
4. What is surprising?
5. What raises some challenges for you?
6. What are the relevant characteristics or specific context of this class that may have affected your results?
7. How long did it take you to process the results?
